

My name is Natan Cramer, I am a third year pediatrics resident at Banner Diamond Children's hospital (affiliated with the UA). I was wondering if anyone would be able to help me build an app for a quality improvement program I am doing. My project involved annotating multiple nationally recognized guidelines for common diagnoses we see with our patient's in clinic. I created flowcharts and algorithms based on what I felt was the most clinically relevant information present in these guidelines. I did this in the hopes of making clinic visits more efficient with easier clinical decision making. I'm also hoping that clinician antibiotic choices will eventually trend more towards national guidelines with the help of this quickguide. To make my resource/guide as user friendly as possible I was thinking about converting into an app.

If anyone is interested in helping me convert my document into an online version, please feel free to email me directly.

Thank you,

Natan
